Whether you're a first-time project developer or an experienced developer with a strong interest in. net, I'm glad to have you here! You've come to the right place! Neodata is a project management tool with features that allow developers to track projects, plan tasks, coordinate with others, and share project information. Using Neodata will save you time and money and help you better manage your projects and your time. This is the only open source project management tool written in PHP and is completely customizable. Neodata has a visual interface and is designed to be easy-to-use, while still offering a great deal of flexibility. The Neodata user experience is centered around the project, tasks, and time line; it should not be confused with a general project management solution. The Neodata user interface is clean and simple to use, with a number of unique features that make it very easy to work with. The project content is divided into 3 main components: Project Management Tasks Task Dependencies The project management view shows the current project and provides an overall view of the project. Each project has an independent view, which is also called a task board. This board shows the project components (called tasks) in a single view. Tasks can be linked to each other in a visual way, and can be configured in many ways. You can also navigate through the tasks, creating custom views of the tasks. The task view contains all of the tasks for the current project, and is also divided into 3 main sections: Task Manager Task List Task details The Task Manager shows the completed, uncompleted, and overdue tasks. The Task List shows the tasks for the current project in the order they were started. The Task details view shows the details for a selected task in more detail. All tasks can be filtered using the task search field and lists the tasks you've searched for. Task dependencies are a visual representation of a task. A 82157476af
